

National Institute for Educational Policy Research  
“Research on Educational Innovation Taking Advantage of the Progress of  
Advanced Information Technology” project

(Research representative: FUJIWARA Fumio, Director of the Department for Elementary and Secondary Education Research; Research period: FY 2019 to FY 2022)

(Summary of research) The research provides the knowledge that contributes to the examination of measures for promoting **educational innovation to further improve the education quality** by actively adopting the progressing advanced information technologies such as ICT and AI for school education.

In order to contribute to the formation and implementation of policies, we proceed with sharing of research results and promote “open science” in cooperation with persons concerned such as policy makers, educators, and information technology developers.
